Jeremy W. Crampton (M.S. and Ph.D., Geography, Penn State) is Associate Professor of Geography at the University of Kentucky, where he has been since 2011. He previously held positions at Georgia State University and George Mason University. Crampton is the author of *Mapping—A Critical Introduction to Cartography and GIS* (Wiley-Blackwell, 2010) which provides an introduction to critical GIS and cartography. At UK he co-founded the “New Mappings Collaboratory” (New Maps) with Matthew Zook and Matthew Wilson. The goal of New Maps is to form an interdisciplinary research cluster focused on new forms of geotechnology. We are developing a new GIS Certificate, as well as increasing our online GIS capabilities, which will result in an online GIS Certificate available for both UK and non-UK students. New Maps also has an ongoing interest in self-enabled digital mappings, and has worked with the Public Laboratory to perform balloon and drone (quadcopter) mapping across campus. We are very interested in thinking through the next generation campus in the era of the “Internet of everything” to produce a more sustainable campus environment.
